Abstract of **JP1254623**

PURPOSE: To prepare a therapeutic agent for cancers comprising an inhibitor of the sphingoglycolipid metabolism as an active ingredient without suppressing functions of the bone marrow and systems related thereto. **CONSTITUTION:** This therapeutic agent for cancers comprises an inhibitor of the sphingoglycolipid metabolism, preferably a compound represented by the formula (R is an aromatic ring, cyclohexane or a 10-15C aliphatic group; R<1> is an amine; R<2> is a 9-17C aliphatic group) and its therapeutically permissible salt, e.g. D-, L and DL-threo-1phenyl-2-decanoylamino-3-morpholino-1-propanol as an active ingredient. The therapeutic agent can further be used for treating non-malignant diseases caused by cell proliferation such as benign tumors, warts and skin growth, preventing the fetal growth and terminating undesirable pregnancy.
